RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 22 pages. Original publisher: Denver, Colo. : U. S. Dept. of the Interior, U. S. Geological Survey, 2002. OCLC Number: (OCoLC)50711009 Subject: Geochemistry -- Laboratory manuals. Excerpt: . . . The acetate anion elutes early during the chromatographic run. The retention time of the anions also seem to differ when large amounts of acetate are present. Therefore, this method is not recommended for leachates of solid samples when acetate is used for pH adjustments. In addition to these problems described by Pfaff and others (1991), another problem may arise from analysis of a large number of samples of low pH containing Fe and SO. The sulfate may 4 accumulate by adsorption on Fe precipitates, to be released in subsequent elutions, resulting in elevated SO concentrations. This problem can be solved by adding 100 l of concentrated (100x) 4 eluent to 5ml of sample to raise the pH 4. 5. The solution is covered and allowed to sit over night, decanted and filtered through a. 45 m filter prior to running. Interference can also be caused by metal contamination on the columns. This was experienced when running samples containing 500 ppm CuSO4. The problem was not recognized until check standards were run at the end of the job. Washing the columns with 500 ml of. 01M oxalic acid solution followed by 500ml DI water removed the contamination. Scope This method is applicable to the analysis of natural waters and leachate solutions that do not contain acetate. It can be extended to include the analysis of water leachates of solid samples. o Liquid samples should be refrigerated at 4 C and stored no longer than 28 days when sulfate and nitrate are to be analyzed. For...
